

# THE GIFT ECONOMY

3-5 players. 10 minutes. Three rules.

---

## SETUP

Each player takes one coloured set of cards numbered 1 to 7. That is your hand all game. Shuffle the nine green Prize cards face down in the middle.

## EACH ROUND

- 1 BID.** Flip the top Prize. Everyone secretly plays one card face down, then all reveal at once.
- 2 CANCEL.** Any number played by more than one player is crossed out. The highest number still standing takes the Prize.
- 3 GIVE.** Everyone passes the card they just played to the player on their left. It goes into that player's hand.

## WINNING

After all nine Prizes are gone, add up the points in front of you. Most points wins.

### THE CATCH

Winning costs you your best card and hands it straight to your neighbour. Playing a 1 loses the round on purpose, but clogs their hand with junk. And if you are sure two people will both slam their 7, a 5 wins it outright.

---

## PLAYTEST LOG

Seconds per round ..... Winner ..... Last place .....

Did anyone dump a 1 or 2 on purpose? Y / N

Was the last round still tense? Y / N

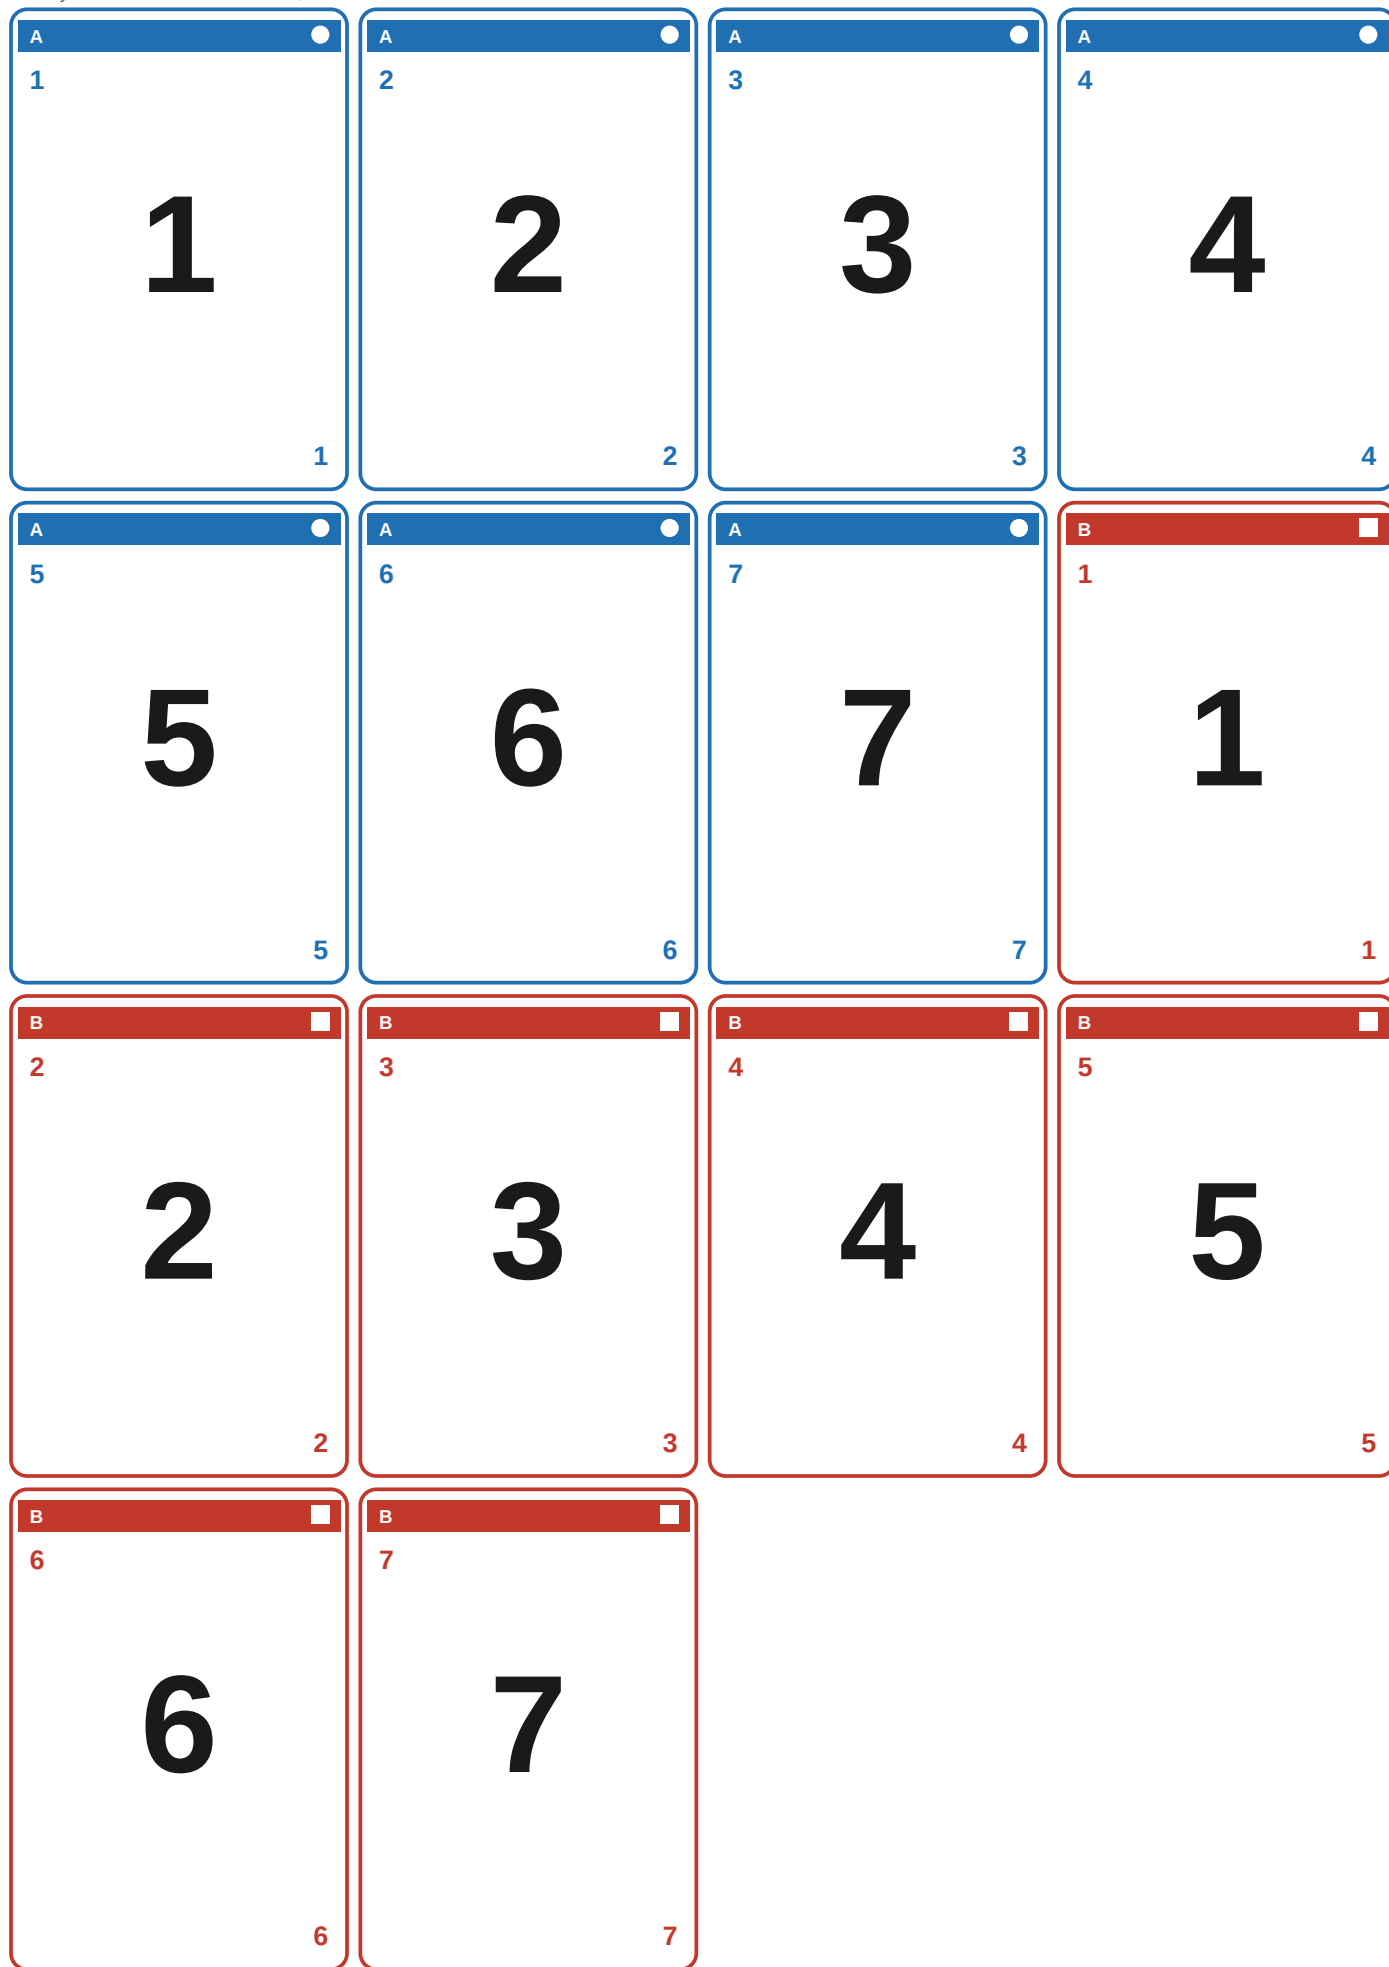

**What broke, and what I changed:**

---

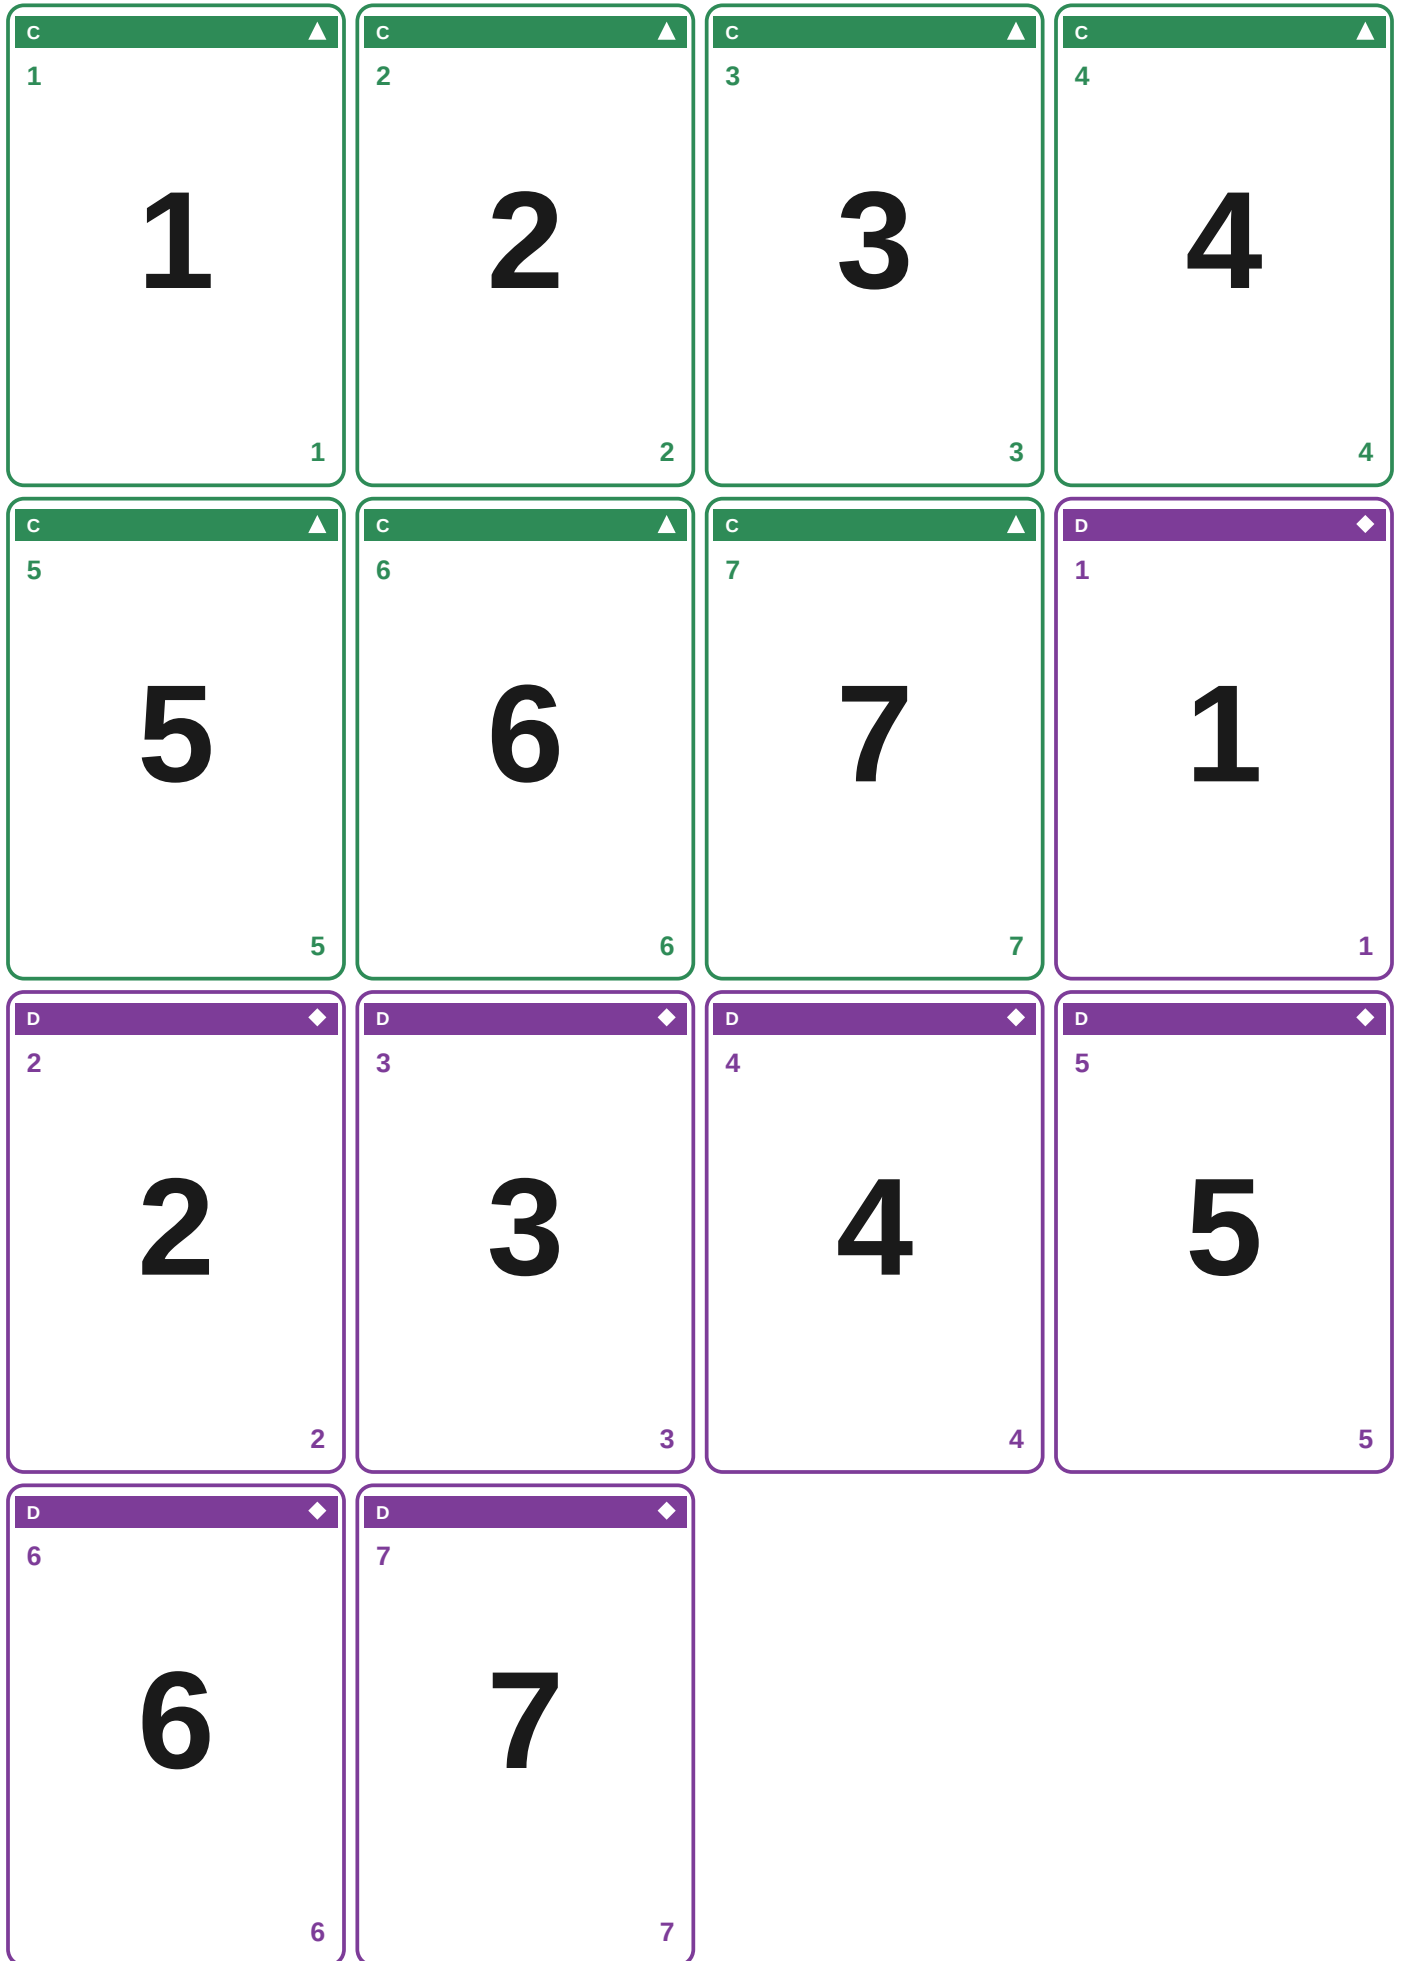

---

---

Player hands 1 and 2 - cut out, one colour each

Player hands 3 and 4 - cut out, one colour each

Player hand 5 (only for a 5-player game) + the nine Prize cards
